

APPLICATION BULLETIN

- Customer:** A Large Publishing Company
- Application:** In-plant handling of signatures
- Product:** ROPAK™ 45"x48"x42" containers

- Problem:** The publishing company banded their signatures between plywood boards cut to size and then stacked those bundles onto pallets. Not only was the process time consuming, but the company was also unable to stack the loaded wooden pallets because the signatures would be damaged. Exposure to dirt, dust and forklift abuse was a common occurrence.
- Solution:** The ROPAK containers offer easy access to the signatures through two-drop doors. The signatures can be handled easily and safely throughout the facility. Their product can now be stored 3 to 4 containers high with significant savings in warehouse space and costs.
- Results:** With the conversion to ROPAK continuous-use collapsible containers, this publishing company is experiencing labor and space savings along with improved product quality and customer satisfaction.
