STORAGE SOLUTIONS

Enter the Future of Systems

Interlake

DEDICATED. GROWING. INNOVATIVE. SETTING NEW STANDARDS.

SELECTIVE RACK

Selective rack is designed for immediate load access of all pallets. Interlake's Interack-30™, with its patented wedge stud, Interlock and teardrop keyhole beam-to-frame connection, continues to set the industry standard in connection design. Narrow keyholes produce greater cross-sectional strength, increasing overall capacity and safety. Wedge studs draw the beam end plate firmly against the column creating the most rigid system available. While many competitors utilize an Interlake look-alike teardrop design using round studs, none have the unique flat-sided wedge stud which reduces stress in the keyhole area providing optimal strength and support. Interack-30 has an extensive line of accessories which allow you to customize a system to fit your needs.

DRIVE-IN/DRIVE-THRU RACK

Drive-in rack is an economical, high-density storage rack design. It requires fewer aisles, allowing up to 75% more pallet storage than conventional pallet rack. The placement of frames and reinforcing struts is computer calculated to match individual upright section requirements.

Drive-thru rack has the added benefit of first-in/first-out capabilities and allows for traffic tunnels to pass through on longer rows.

Interlock™

Safety is the number one concern in warehouses, storage rooms and "big box" retail operations. Employee and customer safety was a primary focus when Interlake's engineers set out to design a beam connection unlike any other. Little training is required to understand the operation of the new Interlock™. The Interlock seats automatically into the column, locking securely into place when the beam is installed. No sliding parts! No additional pins or hardware! This positive automatic engagement guards against accidental beam displacement and exceeds RMI requirements of 1,000 pounds of upward force without failure.

Enter the Future of Storage Systems

Interlake's products are setting new industry standards for engineered reliability and innovative design.

CARTON FLOW

Interlake's Selecta-Flo® 2000™ carton flow system delivers dramatic cost savings in order picking: 25% to 75% over static systems. Separate stocker and picker aisles and picking faces that are always fully stocked enhance the efficiency of your operation. Efficient first-in/first-out rotation assures food distributors of product freshness and high visibility prevents out-of-stock situations. Our exclusive clipless track and guide system speeds assembly and reconfiguration. Steel-Axle Wheels more than double the wheel strength and provides 3-4 times the abuse resistance of other designs.

SHALLOW LANE

A first-in/first-out retrieval system, shallow lane rack can double or triple capacity compared to conventional pallet rack designs. It's ideal for freezer warehouses, food distribution centers, or for storage of high-volume consumer goods. If your operation involves a significant amount of pallet or carton order picking, shallow lane can save you time, floor space and money.

PUSH BACK RACK

This versatile two, three and four deep pallet flow system optimizes storage density for higher throughput product storage. Push Back provides tighter stocking control, maximum space utilization and reduced product damage. Pallets are fed and retrieved from one aisle so that lift equipment is not required to reach or drive into the system. Pick times are reduced giving your throughput a productive push.

CANTILEVER RACK

Cantilever rack has no aisle uprights to limit the use of horizontal space making it ideal for long or bulky items like carpet, lumber, furniture or tubing. Our patented Lok-Joint features a pin locking system that provides the strongest and safest arm-locking method in the industry and makes our cantilever rack easy to assemble and easy to readjust. Accessories include drop-in steel decks and a spring-loaded entry guide system for safety and protection of both merchandise and the rack system.

Interlake

INTERGARD 50™

The Intergard 50™ will protect your rack, machinery and other vulnerable equipment against damage and abuse in the industrial workplace. Use the versatile rail and post design of Intergard 50 to provide years of high-durability for your equipment.

Structural Offset Frame Base

RACK Rx

A rack is subject to damage when care is not exercised, and this damage represents

a safety hazard and potential liability. Interlake is committed to the design and maintenance of safe rack structures so it is with that in mind that we offer Interlake Rack Inspection and Rack Repair services. Whether you choose our original style of column repair or Interlake's new Structural Offset Frame Base, you'll be taking the right steps toward a safer working environment.

INTERLAKE EXPRESS

Interlake Express is a program developed to allow Authorized Interlake Distributors 48-hour shipment of our most requested standard product. We have warehouses in Lodi, CA, Kankakee, IL, and Sumter, SC to insure quick delivery and lower transportation costs on orders up to \$50,000.

Interlake is the leading manufacturer of storage rack in the world, and an innovator in the manufacture and design of conveyor and sortation products. Interlake will design a completely integrated order fulfillment system with everything from static and dynamic storage rack and sophisticated accumulation and sortation products to paperless order picking technology and state-of-the-art controls. An exclusive teaming agreement with Sandvik Sorting Systems for the distribution market allows us to integrate their superb sortation devices

into any system we design providing the best all around solution for any order fulfillment environment.

Headquartered in Naperville, Illinois, Interlake has four strategically located manufacturing plants in Pontiac, IL, Sumter, SC, Shepherdsville, KY and Lodi, CA. Interlake is a member of the Industrial Services Group of GKN, a \$6 billion global company employing over 36,000 people in 40 countries and serving the automotive, aerospace and industrial sectors.
